

Amendments to the Claims:

Please amend Claims 1, 4, 6, and 8 through 10 to read, as follows. Note that all the claims currently pending in this application, including those not presently being amended, have been reproduced below for the Examiner's convenience.

---

1. **(Currently Amended)** A developer supply container detachably mountable to an image forming apparatus, said container comprising:

a developer accommodating portion;  
a developer discharging portion including having a hole through which a developer passes and a shutter for closing and opening said the hole; and

a cover covering said developer discharging portion, said cover being movable between a first position in which said cover covers said developer discharging portion and a second position in which said developer discharging portion is exposed,

wherein the said second position is closer to said developer accommodating portion than the said first position, and

wherein said cover moves from the first position to the second position in response to an operation of mounting said container to said apparatus.

B1  
cont'd

2. **(Original)** A container according to Claim 1, further comprising a rail for guiding movement of said cover, said rail including a first guiding portion for guiding said cover to move in parallel with said developer accommodating portion and a second guiding portion for guiding said cover toward said developer accommodating portion.

*B  
Contd*

3. **(Original)** A container according to Claim 1, further comprising urging means for urging said cover to the first position when said container is out of said apparatus.

4. **(Currently Amended)** A container according to Claim 1, further comprising a tape, which seals said the hole when said container has not been used, wherein said tape has one end fixed to said cover, and wherein said tape is peeled off when said cover is first moved from the first position to the second position.

5. **(Canceled)**

6. **(Currently Amended)** An image forming apparatus comprising:  
an image bearing member;  
developing means for developing a latent image formed on said image bearing member; and  
developer supply container detachably mountable to a main assembly of said image forming apparatus, said container including:  
a developer accommodating portion;  
a developer discharging portion including having a hole through which a developer passes and a shutter for closing and opening the hole; and  
a cover covering said developer discharging portion, said cover being movable between a first position in which said cover covers said developer discharging portion and a second position in which said developer discharging portion is exposed,

wherein the said second position is closer to said developer accommodating portion than the said first position, and

wherein said cover moves from the first position to the second position in response to an operation of mounting said container to said apparatus.

7. **(Original)** An apparatus according to Claim 6, further comprising a rail for guiding movement of said cover, said rail including a first guiding portion for guiding said cover to move in parallel with said developer accommodating portion and a second guiding portion for guiding said cover toward said developer accommodating portion.

*B' cont'd*

8. **(Currently Amended)** An apparatus according to Claim 6, further comprising a projection for being abutted by said cover,

wherein when said container is mounted to the main assembly of said apparatus, said cover abuts said projection so that movement of said cover is regulated, and wherein said cover moves from the first position to the second position with an a mounting action of mounting said container to the main assembly of said apparatus.

9. **(Currently Amended)** An apparatus according to Claim 6, further comprising a tape, which seals said the hole when said container has not been used, wherein said tape has one end fixed to said cover, and wherein said tape is peeled off when said cover is first moved from the first position to the second position.

*B1*  
*AM*

10. (**Currently Amended**) An apparatus according to Claim 6, wherein at least said developing means is detachably mountable to the main assembly of said apparatus, and

wherein said shutter is movable in response to a relative movement between said container and said developing means.

11. (**Canceled**)

12. (**Original**) An apparatus according to Claim 10, wherein said image bearing member is detachably mountable to the main assembly of said apparatus together with said developing means.
